Abhishek

Software Engineer | Backend
abhisheks.ai.dev@gmail.com | +91-7888816472 | Portfolio | GitHub | LinkedIn

Profile

Computer Science engineering student building toward backend software engineering, with hands-on experience in Node.js, Express.js, PostgreSQL, SQL, Python, and REST APIs. Currently deepening backend engineering through implementation-focused work in database design, transactions, authentication, pagination, API structure, and system fundamentals.

Education

Swami Vivekananda Institute of Engineering & Technology — Banur, Punjab
B.Tech. in Computer Science Engineering | ***CGPA: 8.14/10*** — *Aug 2023 – Aug 2027*

Experience

Independent Developer — Remote
Independent Software Projects — *Jan 2025 – Present*

- Built and iterated independent software projects across web, mobile, backend APIs, databases, and AI-assisted application workflows.
- Recently shifted toward hands-on backend engineering, implementing Node.js/Express APIs and PostgreSQL-backed applications while studying transactions, constraints, normalization, joins, aggregation, and backend layering.
- Document technical learning through small implementations, experiments, and structured GitHub READMEs while progressively rebuilding previously AI-assisted concepts independently.

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, SQL
Backend: Node.js, Express.js, FastAPI, REST APIs
Database: PostgreSQL, SQL
Systems & Tools: Linux, Git
Frontend: React.js, React Native, Next.js, HTML/CSS, Tailwind CSS
Familiarity: Redis, WebSockets, Socket.io, Docker, RAG, Gemini API, Ollama, Pandas, NumPy, Matplotlib

Projects

Backend Engineering Lab — Node.js, Express.js, PostgreSQL, SQL

- Built a sequence of backend and database implementations covering HTTP servers, Express.js routing, controllers, services, repositories, middleware, PostgreSQL integration, and REST API development.
- Implemented hands-on database exercises covering transactions, constraints, normalization, joins, aggregation, and advanced SQL queries, documenting each topic with code and technical READMEs.
- Currently extending the backend with pagination and authentication while continuing into API design, performance, query optimization, and system fundamentals.

ChatPDF — AI Document Q&A — Python, FastAPI, RAG, ChromaDB, Gemini API

- Built the core document question-answering workflow using retrieval-augmented generation, document ingestion, chunking, embeddings, vector retrieval, and context-grounded generation.
- Worked through the retrieval pipeline from document processing to generated responses and studied how retrieved context is passed into the generation stage.

LIORA — AI-Powered Skincare Platform — React Native, Node.js, PostgreSQL, Redis

- Contributed to a full-stack mobile application spanning a React Native client, backend services, PostgreSQL persistence, authentication flows, caching, and AI-powered functionality.
- Gained practical exposure to JWT authentication, validation, caching, image-analysis workflows, and role-based application flows through an AI-assisted implementation process.

Achievements & Leadership

- **3rd Place, Hackathon 2026** — Won **INR 20,000** as part of a team competing with an AI/ML financial forecasting solution.
- **Technical Leadership** — Coordinated the Super 60 technical community and supported workshops, hackathons, technical activities, and peer learning initiatives.
- **Community Building** — Organized and supported hands-on programming activities focused on practical development and student learning.
